RES-KEM CORPORATION

Water Treatment Equipment

General Water
Service Deionization Specialists

Res-Kem Service

Res-Kem personnel have many years experience modifying, converting, and upgrading older systems to more current state-of-the-art designs.

Service contracts and preventative maintenance contracts are available for all equipment regardless of manufacturer.

regeneration and retained sample. This level of ongoing detail affords General Water's customer base complete resin traceability for any and all resins delivered to their site.

For super critical applications, demanding a segregated resin supply, General Water is both prepared and

willing to offer this level of service. All resin types from a variety of manufacturers are available depending upon customer requirements and preference.

General Water offers a broad line of after market expendable items suitable for use with high purity and ultra high purity DI water systems. Operating out of Res-Kem's adjacent warehouse, General Water offers replacement cartridge filters, UV bulbs and sleeves, tanks, valves, and other expendable items. Same day shipment is usually available and installation by a factory trained technicians can be arranged.

Service deionization specialists—from laboratory system to high flow process application
