Fleck’s electromechanical timers are simple to program and easy to service. The robust electromechanical powerhead is designed with heavy-duty 3/8˝ wide plastic gears and a simple mechanical design for quick access to all internal components.

**Regeneration Types**

- Time Clock Delayed
- Meter Delayed
- Meter Immediate

**Electrical Rating**

- 24, 120 or 240 VAC, 50/60 Hz

**Operating Temperature Range**

- 32° F - 120° F (0° C - 40° C)

---

**How to set the time of day (Models 3200 & 3210):**

Press and hold the red button in to disengage the drive gear. Turn the large gear until the actual time of day is at the time of day pointer. Release the red button to again engage the drive gear.

**How to manually regenerate your water conditioner at any time:**

Turn the manual regeneration knob clockwise. This slight movement of the manual regeneration knob engages the program wheel and starts the regeneration program. The black center knob will make one revolution in the following approximately three hours and stop in the position shown in the drawing.

Even though it takes three hours for this center knob to complete one revolution, the regeneration cycle of your unit might be set only one half of this time. Conditioned water may be drawn after rinse water stops flowing from the water conditioner drain line.

**How to adjust regeneration time:**

1. Disconnect the power source.
2. Locate the three screws behind the manual regeneration knob by pushing the red button in and rotating the 24 hour dial until each screw appears in the cut out portion of the manual regeneration knob.
3. Loosen each screw slightly to release the pressure on the time plate from the 24 hour gear.
4. Locate the regeneration time pointer on the inside of the 24 hour dial in the cut out.
5. Turn the time plate so the desired regeneration time aligns next to the raised arrow.
6. Push the red button in and rotate the 24 hour dial. Tighten each of the three screws.
7. Push the red button and locate the pointer one more time to ensure the desired regeneration time is correct.
8. Reset the time of day and restore power to the unit.
The Fleck 3200ET provides precise timing for efficient use of water and salt.

- Includes Auxiliary Relay with front panel Totalizer and flow rate displays.
- All valves or meters with the 3200ET come with protective NEMA 3R enclosure that is water resistant, rain tight, corrosion resistant and UV stable.
- Suitable for indoor or outdoor applications.
- All parameters are adjusted via timer programming and can be modified at any time.
- Bright 7 digit VFD display with user panel utilizing LED status/programming indicators.
- All volume displays are in gallons or liters.
- A regeneration lockout input is available.

**System Configurations**
For different system configurations are available using either time clock, meter or sensor inputs to initiate a regeneration.
